JusticeTrax Earns ISO 9001:2000 Registration

Mesa, Arizona JusticeTrax, the leader in forensic case management software announced that it has earned ISO 9001:2000 registration. The scope of the registration includes all aspects of product design, product development, implementation and customer service functions in the company and is recognized by accreditation bodies in the United States, the United Kingdom and the Netherlands. In keeping with JusticeTrax's rapidly expanding international footprint the company is also currently in the registration process for Asia Pacific and Europe.

"As many of our customers already know, this process is not for the faint of heart. We do however, feel it is important to demonstrate to the forensic laboratories we support around the world, that they can trust their mission-critical evidence and laboratory management process to us," states Simon Key, President of JusticeTrax. This makes sense in that forensic labs must register to tough ISO 17025 standards as well.

Early this year the company introduced Version 4, the latest release of its industry-leading JusticeTrax LIMS-plus® forensic case management software. LIMS-plus Version 4 is the first laboratory case management software based on the innovative .NET framework introduced by an established forensic LIMS software company. Adds Key, "These two announcements are no coincidence, but part of a series of planned investments. While our competitors have taken money out of the forensic marketplace over the years, JusticeTrax is the only company to have reinvested in a new generation of forensic case management software on this scale and pushed its quality standards to this degree."

Registration to the ISO 9001:2000 standard provides peace of mind to customers in knowing that JusticeTrax has adopted and implemented strict guidelines for the product design and development process which deliver built-in quality measures with customer satisfaction as a top priority.

Since it first introduced LIMS-plus for forensic labs in 1996, JusticeTrax has cared for more users in more forensic labs than any other software company. The company serves forensic labs in North America, The Caribbean and Australia.

Company management is available for interview.
